Semester wise distribution of Courses and marks

Semester-I

Course /paper code	Papers No.	Course title	Credit	Marks
CHE-101	I	Inorganic Chemistry-I	04	100 (75+25)
CHE-102	II	Organic Chemistry-I	04	100 (75+25)
CHE-103	III	Physical Chemistry-I	04	100 (75+25)
CHE-104	IV	Sec-A: Computers for Chemists(Compulsory for all students)[CHE-104A]	60	100 (75+25)
		Sec-B: Mathematics For Chemists (For students without Mathematics in B.Sc.) [CHE-104B]	40	
		OR Sec-C: Biology for Chemists (For students without Biology in B.Sc.) [CHE-104C]		
CHE-105	Practical	Inorganic, Organic, Physical, Viva voce and Records	04	100 (75+25)
		Research Project	04	

Semester-II

Course /paper code	Papers No.	Course title	Credit	Marks
CHE-201	I	Inorganic Chemistry-II	04	100 (75+25)
CHE-202	II	Organic Chemistry-II	04	100 (75+25)
CHE-203	III	Physical Chemistry-II	04	100 (75+25)
CHE-204	IV	Spectroscopy and Diffraction methods	04	100 (75+25)
CHE-205	Practical	Inorganic, Organic, Physical, Viva voce and Records	04	100 (75+25)
		Research Project	04	

Semester-III

Course /paper code	Papers No.	Course title	Credit	Marks
CHE-301	I	Application of Spectroscopy	3	100 (75+25)
CHE-302	II	Bioinorganic and Bioorganic Chemistry	3	100 (75+25)
CHE-303	III	Environmental Chemistry	60	100 (75+25)
		Photochemistry	40	
CHE-304	IV	Biophysical chemistry and Solid state chemistry	3	100 (75+25)
CHE-305	Practical	Inorganic, Organic, Physical, Viva voce and Records	12	100 (75+25)
		Total	24	500

Semester-IV

Course /paper code	Papers No.	Course title	Credit	Marks
CHE-400(A-O)	I	Elective paper	3	100 (75+25)
CHE-400(A-O)	II	Elective paper	3	100 (75+25)
CHE-400(A-O)	III	Elective paper	3	100 (75+25)
CHE-400(A-O)	IV	Elective paper	3	100 (75+25)

CHE-401	Practical	Inorganic, Organic, Physical, Viva voce and Records	6	100 (75+25)
		Project and Dissertation, Evaluation and Viva-voce on submitted Dissertation(Internal)	6	
		Total	24	500

Elective papers

- | | |
|---|----------------------------------|
| A. Organ transition Metal chemistry | F. Organic Synthesis-I |
| B. Bioinorganic and Supramolecular Chemistry, | G. Organic Synthesis II |
| C. Photo Inorganic chemistry | H. Heterocyclic Chemistry |
| D. Analytical Chemistry | I. Chemistry of Natural products |
| E. Polymers | J. Medicinal Chemistry |

Note- Out of ten elective papers, students select any four papers.

Inorganic Chemistry -I**UNIT-I: Symmetry and Group Theory in Chemistry**

Symmetry elements and symmetry operation, definitions of groups, subgroups, relation between orders of a finite group and its subgroup. Conjugacy relation and classes. Point symmetry group. Schonflies symbols, representation of groups by metrics (representation of the C_n , C_{nv} , C_{nh} , D_{nh} etc groups to be worked out explicitly). Character of a representation. Character tables and their use in spectroscopy.

UNIT-II: Stereochemistry and Bonding in Main Group Compounds

VSEPR, Walsh diagrams (tri and penta-atomic Molecules), $d\pi$ - $p\pi$ bonds, bent rule and energetics of hybridization, some simple reactions of covalently bonded molecules.

UNIT-III: Metal-Ligand Equilibrium in Solution

Stepwise and overall formation constants and their interaction, trends in stepwise constants, factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand, chelate effect and its thermodynamic origin, determination of binary formation constants by pH metry and spectrophotometry.

UNIT – IV: Metal-Ligand Bonding

Limitation of crystal field theory, molecular orbital theory. Octahedral, tetrahedral and square planar complexes, π -bonding and molecular orbital theory.

Books Recommended

1. F.A. Cotton and G. Wilkinson *Advanced Inorganic Chemistry*, 6th End.(1999), John Wiley & Sons, New York.
2. James E. Huheey, *Inorganic Chemistry*, 4th End. (1993), Addison-Wesley Pub. Co., New York.
3. Chemistry of the elements, N. N. Greenwood and A. Earnshaw, Pergammon.
4. Inorganic Electronic Spectroscopy, A. B. P. Lever, Elsevier.
5. Comprehensive Coordination Chemistry eds., G Wilkinson, R. D. Gillars and J. A. McCleverty. Pergammon.
6. Magneto Chemistry, R. L. Carlin, Springer Verlag.

Paper II - Organic Chemistry-I

[CHE-102]

Credit- 4

UNIT-I:

Nature of bonding in Organic Molecules

Delocalized chemical bonding-conjugation, cross conjugation, resonance, hyperconjugation, bonding in fullerenes. Aromaticity in benzenoid and non-benzenoid Compounds, Huckel's rule, energy level of pi-molecular orbitals, annulenes, antiaromaticity.

UNIT-II

A- Stereochemistry Conformational analysis of cycloalkanes, declines, effect of conformation of reactivity Elements of symmetry, chirality, molecule with more than one chiral center, threo and erythro isomers, stereospecific and stereo selective synthesis. Asymmetric synthesis. Optical activity in the absence of chiral carbon biphenyls, allenes and spiranes

B- Reaction mechanism, Structure and reactivity Methods of determining mechanism, isotope effect. Generation structure, stability and reactivity of benzyne, carbenes and nitrenes. Effect of structure on reactivity resonance and field effect, steric effect, quantitative treatment.

UNIT-III:

Aliphatic nucleophilic substitution

The SN_2 , SN_1 , mixed SN_1 and SN_2 , the neighboring group mechanism, neighboring group participation by Pi and Sigma bonds, anchimeric assistance Classical and non classical carbocations. The SN_i mechanism nucleophilic substitution at an allylic, aliphatic trigonal and a vinylic carbon. Reactivity effects of substrate structure, attacking nucleophile. leaving group and reaction medium, ambident nucleophile, regioselectivity.

UNIT-IV:

A- Aromatic electrophilic substitution

The arenium ion mechanism, orientation and reactivity, energy profile diagrams. The Ortho/Para ratio, ipso attack, orientation in other ring systems. Vilsmeier reaction, Gattermann-Koch reaction.

B- Aromatic nucleophilic substitution

The SN_{Ar} . SN_i , benzyne and SRN_1 mechanism. Reactivity effect of substrate structure, leaving group and attacking nucleophile. The Von Richter, Sommelet Hauser, and Smiles rearrangements.

BOOKS SUGGESTED

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg. Plenum.
3. A Guide Book to Mechanism in Organic Chemistry, Peter Sykes, Longman.
4. Structure and Mechanism in Organic Chemistry, C.K. Ingold, Cornell University press.
5. Organic Chemistry, R.T. Morrison and R.N. Boyd. Prentice Hall.
6. Modern Organic Reactions H.O. House, Benjamin
7. Principles of Organic Synthesis, R.O.C. Normon and J.M. Coxon, Blackie Academic and professional.
8. Pericyclic Reactions. S.M. Mukherji, Macmillan India.
9. Reaction Mechanism in Organic Chemistry : S.M. Mukherji and S.P. Singh, Macmillan.
10. Stereochemistry of Organic Compounds D. Nasipuri, New Age International.
11. Stereochemistry of Organic Compounds, P.S Kalsi, New Age, International.

Paper III: Physical Chemistry-I

[CHE-103]

Credit- 4

UNIT-I

A-Unifying Principles

Electromagnetic radiation, interaction of electromagnetic radiation with matter-absorption, emission, transmission, reflection, refraction, dispersion, polarization and scattering. Uncertainty relation and natural line width and natural line broadening, selection rules, intensity of spectral lines, Born Oppenheimer approximation, rotational, vibrational and electronic energy levels.

B-Microwave Spectroscopy

Classification of molecules, rigid rotor model, Effect of isotopic substitution on the transition frequencies intensities, non-rigid rotor. Stark effect. Applications.

UNIT-II: Vibrational Spectroscopy

A. Infrared Spectroscopy

Review of linear harmonic oscillator, vibrational energies of diatomic molecules, zero point energy, force constant and bond strength; anharmonicity, P.Q.R. branches, vibrations of polyatomic molecules, Selection rules, normal modes of vibration, factors affecting the band positions and intensities.

B. Raman Spectroscopy

Classical and quantum theories of Raman effect Pure rotational, vibrational and vibrational-rotational Raman spectra, selection rules, mutual exclusion principle. Applications of Raman spectroscopy.

UNIT- III : Quantum Chemistry

A. Fundamental Background

Operators, Postulates of Quantum Mechanics, Hamiltonian for different systems, Angular momentum.

B. Introduction to Exact quantum Mechanical Results:

The Schrodinger equation, discussion of solutions of the Schrodinger equation to some model system viz, particle in a box, the harmonic oscillator, the rigid rotator, the hydrogen atom.

C. Approximate Methods:

The Variation theorem, linear variation principle. Perturbation theory (First order and nondegenerate) \ Application of variation method and perturbation theory to the Helium atom.

D. Electronic structures of Atoms:

Russel-Saunders terms and coupling schemes, term symbols for the p^n and d^n configurations Spin orbit coupling and Zeeman splitting, introduction to the methods of self-consistent field, Slater type orbitals.

E. Molecular orbital theory:

Hückle theory of conjugated systems, bond order and charged density calculations. Application to ethylene, butadiene, cyclobutadiene and Benzene molecules.

UNIT- IV: Chemical Dynamics

Methods of determining rate law, collision theory of reaction rates steric factors Activated complex theory, Arrhenius equation and the activated complex theory, Ionic reactions kinetic salt effect, steady state kinetics. Dynamic chain (hydrogen-bromine reaction, pyrolysis of acetaldehyde) photochemical (hydrogen-bromine reaction hydrogen-chloride reactions) and oscillatory reactions (Belousov Zhabotinsky reaction) homogeneous catalysis, kinetics of enzyme reaction General features of fast reaction study of fast reaction by relaxation method flash photolysis and the nuclear magnetic resonance method. Dynamics of unimolecular reactions (Lindemann Hinshelwood and Rice –Rampersperger-Kassel –Marcus (RRKM) theories of unimolecular reactions).

BOOKS SUGGESTED

1. Modern Spectroscopy, J.M. Hollas, John Wiley.
2. Physical methods in Chemistry, R.S. Drago, Saunders College.
3. Introduction to Molecular Spectroscopy G.M. Barrow, Mc Graw Hill.
4. Physical Chemistry P.W. Atkins, ELBS.
5. Introduction to Quantum Chemistry, A.K. Chandra, Tata Mc Graw Hill.
6. Quantum Chemistry, Ira N. Levine. Prentice Hall.
7. Coulson's Valence, R. McWeeny, ELBS.
8. Chemical Kinetics, K.J. Laidler, McGraw-Hill.
9. Kinetics and Mechanism of Chemical Transformations J. Rajaraman and J. Kuriacose Mc Millan.

Sec-A: Computers for Chemists (Compulsory for all students)

This is a theory-cum-laboratory course with more emphasis on laboratory work.

UNIT- I: Introduction to Computer and Computing:

Basic structure and functioning of computers with a PC as an illustrative example Memory, I/O devices, Secondary storage. Computer languages. Operating systems with DOS as an example. Introduction to UNIX and WINDOWS Data Processing principles of programming. algorithms and flowcharts.

UNIT- II: Computer Programming in FORTRAN/C/BASIC:

The language features are listed here with reference to FORTRAN. The instructor may choose another language such as BASIC or C and the features may be replaced appropriately. Elements of the computer language. Constants and variables. operations and symbols, expressions. Arithmetic assignment statement. Input and Output. Format statement. Termination statements. Branching statements such as IF or GO TO statement. LOGICAL variables. Double precision variables. Subscripted variables and DIMENSION. DO statement FUNCTION and SUBROUTINE. COMMON and DATA statements. (Students learn the programming logic and these language features by hands on experience on a personal computer from the very beginning of this topic)

UNIT- III : Programming in Chemistry:

Development of small computer codes involving simple formulae in chemistry such as van der Waals equation, pH titration. kinetics. radioactive decay. Evaluation of lattice energy and ionic radii from experimental data. Linear simultaneous equations to solve secular equations within the Huckel theory. Elementary structural features such as bond lengths. bond angles, dihedral angles etc. of molecules extracted from a database such as Cambridge data base.

UNIT- IV : Use of Computer Programmes:

The students will learn how to operate a PC and how to run standard programmes and packages. Execution of linear regression. X-Y plot. numerical integration and differentiation as well as differential equation solution programmes. Monte Carlo and Molecular dynamics. Programmes with data preferably from physical chemistry laboratory. Further, the students will operate one or two of the packages such as MATLAB EASYPLOT LOTUS FOXPRO and Word processing software such as WORDSTAR/MS WORD.

Books Suggested

1. Computers and common Sense, R. Hunt and I. Shelley. Prentice Hall.
2. Computational Chemistry, A.C. Norris.
3. Microcomputer Quantum mechanics, J.P. Killingbeck. Adam Hilger.
4. Computer Programming in FORTRAN IV, V. Rajaraman, Prentice Hall.
5. An Introduction to Digital Computer Design. V. Rajaraman and T. Radhakrishna Prentice Hall.

Sec-B: Mathematics For Chemists

(For students without Mathematics in B.Sc.)

UNIT- I: Vectors and matrix Algebra**A- Vectors**

Vectors, dot, Cross and triple products etc. The gradient, divergence and curl.

B- Matrix Algebra

Addition and multiplication: inverse, adjoint and transpose of matrices, special matrices (Symmetric, skew-symmetric Hermitian, skew-Hermitian, unit, diagonal, unitary etc) and their properties Matrix equations: homogeneous, non-homogeneous linear equations and conditions for the solution, matrix eigenvalues diagonalisation determinants (examples from Huckel theory)

UNIT- II: Calculus**A- Differential Calculus**

Functions, continuity and differentiability, rules for differentiation, applications of differential calculus including maxima and minima (examples related to maximally populated rotational energy levels. Bohr's radius and most probable velocity from Maxwell's distribution etc) exact and inexact differentials with their applications to thermodynamic properties.

B- Integral calculus.

Basic rules for integration, integration by parts. partial fraction and substitution. Reduction formulae applications of integral calculus. Functions of several variables. partial differentiation. co-ordinate transformations (e.g. cartesian to spherical polar).

UNIT- III: Elementary Differential Equations

Variables-separable and exact first-order differential equations. homogeneous. exact and linear equations. Applications to chemical kinetics. secular equilibria, quantum chemistry etc . Solutions of differential equations by the power series method, Fourier series, solutions of harmonic oscillator and Legendre equation etc., spherical harmonics second order differential equations and their solutions.

UNIT- IV: Permutation and Probability

Permutations and combinations, probability and probability theorems, probability curves, average, root mean square and most probable errors, examples from the Kinetic theory of gases etc.

Books Suggested

1. The chemistry Mathematics Book, E. Steiner, Oxford University Press.
2. Mathematics for Chemistry, Doggett and Sucliffé. Longman.
3. Mathematical preparation for Physical Chemistry. F.Daniels Mc Graw Hill.
4. Chemical Mathematics, D.M. Hurst, Longman.
5. Applied Mathematics for Physical Chemistry. J.R. Barrante. Prentice Hall.
6. Basic Mathematics for Chemists, Tebbutt. Wiley.

Biology for Chemists
(For students without Biology in B.Sc.)

UNIT- I: A- Cell Structure and Functions

Structure of prokaryotic and eukaryotic cells, intracellular organelles and their functions, comparison of plant and animal cells. Overview biological energy currency. Introduction to biomolecules. building blocks of biomacromolecules.

B-Carbohydrates

Structure and functions of important derivatives of monosaccharides like glycosides, deoxy sugars, myoinositol, amino sugars. N-acetylmuramic acid, sialic acid, disaccharides and polysaccharides. Structural polysaccharides-cellulose and chitin. Structure and biological functions of glucosaminoglycans or mucopolysaccharides. Carbohydrates of glycoproteins and glycolipids. Role of sugars in biological recognition. Blood group substances. Carbohydrate metabolism, Kerb's cycle, glycolysis, glycogenesis, gluconeogenesis pentose-phosphate pathway.

UNIT- II: Lipids.

Fatty acids, essential fatty acids, structure and function of triacylglycerols, glycerophospholipids, sphingolipids, cholesterol, bile acids, prostaglandins. properties of lipid aggregates-micelles, bilayers, liposomes and their possible biological functions. Biological membranes. Fluid mosaic model of membrane structure Lipid metabolism β oxidation of fatty acids.

UNIT- III : Amino-acids, Peptides and proteins

Chemical and enzymatic hydrolysis of proteins to peptides, amino acid sequencing. Secondary structure of proteins, forces responsible for holding of secondary structure α -helix, β sheets, super secondary structure, triple helix structure of collagen. Tertiary structure of protein folding and domain structure. Quaternary structure. Amino acid metabolism-degradation and biosynthesis of amino acids. sequence determination chemical/enzymatic/mass spectral. racemization/detection. Chemistry of oxytocin and tryptophan releasing hormone (TRH).

UNIT- IV : Nucleic Acids

Purine and pyrimidine bases of nucleic acids, base pairing via H-bonding structure of ribonucleic acid (RNA) and deoxyribonucleic acids (DNA), double helix model of DNA and forces responsible for holding it. Chemical and enzymatic hydrolysis of nucleic acids. The chemical basis for heredity and overview of replication of DNA, transcription, translation and genetic code. Chemical synthesis of mono and trinucleoside.

Books Suggested

1. Principles of Biochemistry, A.L Lehniger Worth Publishers.
2. Biochemistry, L. Stryer, W.H. Freeman.
3. Biochemistry, J,David Rawn, Nell Patterson.
4. Biochemistry Voet and Voet, John Wiley.
5. Outlines of Biochemistry, E.E.Conn and P.K. Stumpt, John Wiley.

Practicals

Note:-

- i) A complete records of practical exercises; in Inorganic, Organic and Physical Chemistry done during the session must be produced by the candidates in three separate Record Books at the time of practical examination.

Inorganic Chemistry

1. Qualitative analysis of mixtures 20
Qualitative analysis of mixture containing trace elements Tl, Mo, W, Zr, Ti, Th, V, U (Two metal ions in cationic/anionic forms) and insoluble oxides, sulphates and halides. The mixture should not contain more than five cations and should be analyzed by semi micro technique.
2. Paper chromatography 05
Paper chromatography separation of a mixture of the following and measurements of Rf values.
a) Pb^{+2} , Ag^+ , Hg^{+2} (b) Co^{+2} , Ni^{+2} , Cu^{+2} (c) Ba^{+2} , Ca^{+2} , Sr^{+2}

Organic Chemistry

1. Qualitative Analysis 15
Separation, purification, and identification of binary mixture. Preparation of derivatives if possible
2. Organic Synthesis 10
 - i. Adipic acid by chromic acid oxidation of cyclohexanol.
 - ii. Triphenyl methanol from Benzoic acid.
 - iii. Dibenzal acetone from Benzaldehyde.
 - iv. p-chlorotoluene from p-toluidine
 - v. Synthesis of p-nitroaniline and p-bromoaniline.

Physical Chemistry (Any one)**25**

1. Study the adsorption of acetic acid on charcoal and draw the Freundlich isotherm.
2. Show that the order of reaction between acetone and Iodine is zero with respect to Iodine
3. Determination of congruent composition and temperature of a binary mixture e.g. diphenylamine-benzophenone system.
4. Determination of glass transition temperature of a given salt (e.g., $CaCl_2$) conductometrically.
5. Determination of the velocity constant of hydrolysis of an ester / ionic reaction in micellar media.
6. Determination of the velocity Constant of decomposition of Benzene diazonium chloride.

Viva**15****Records****10**

Inorganic-II (Paper I)

[CHE-201]

Credit- 4

UNIT- I: Reaction mechanism of Transition Metal Complexes

Energy profile of a reaction, reaction reactivity of metal complexes, inert and labile complexes, kinetic application of valence bond and crystal field theories, kinetics of octahedral substitution, acid hydrolysis, factors affecting acid hydrolysis, base hydrolysis conjugate base mechanism, direct and indirect evidences in favour of conjugate mechanism, anation reaction, reactions without metal ligands bond cleavage. Substitution reaction in square planar complexes. Redox reactions, electron transfer reactions, mechanism of one electron transfer reactions, outer sphere type reactions,, cross- reactions and Marcus-Hush theory, inner sphere type reactions.

UNIT- II : Electronic spectra and Magnetic Properties of Transition Metal Complexes:

Spectroscopic ground states; Orgel energy level and Tanabe-Sugano diagrams for transition metal complexes (d^1 - d^9 states); Charge transfer spectra; electronic spectra of octahedral and tetrahedral Co(II) and Ni(II) complexes and calculation of ligand-field parameters.

UNIT- III : Metal π -Complexes

Metal carbonyls, structure and bonding, vibrational spectra of Metal carbonyls for bonding and structural elucidation, important reactions of Metal carbonyls, preparation, bonding. Structure and important reactions of transition metal nitrosyl, dinitrogen and dioxygen complexes, tertiary phosphine as ligand.

UNIT- IV: A- Metal Clusters

Higher boranes, carboranes, metallocarboranes

B- Isopoly and heteropoly acids and salts

Books Recommended

1. F.A. Cotton and G. Wilkinson *Advanced Inorganic Chemistry*, 6th Edn.(1999), John Wiley & Sons, New York.
2. James E. Huheey, *Inorganic Chemistry*, 4th Edn. (1993), Addison-Wesley Pub. Co., New York.
3. Chemistry of the elements, N. N. Greenwood and A. Earnshaw, Pergamon.
4. Inorganic Electronic Spectroscopy, A. B. P. Lever, Elsevier.
5. Comprehensive Coordination Chemistry eds., G Wilkinson, R. D. Gillars and J. A. Mc Cleverty. Pergamon.

Organic-II (Paper II)

UNIT- I : Free radical reactions:

Free radical substitution mechanism, mechanism at an aromatic substrate, neighbouring group assistance. Reactivity for aliphatic and aromatic substrates at a bridgehead. The effect of solvent on reactivity. Arylation of aromatic compounds by diazonium salt. Hunsdiecker reaction.

UNIT- II : A- Addition to carbon-carbon multiple bond:

Mechanistic and stereochemical aspects of addition reactions involving electrophile, nucleophile and free radicals, regio and chemo selectivity, orientation and reactivity. Hydrogenation of aromatic rings. Hydroboration. Michael reaction. Sharpless asymmetric epoxidation.

B-Addition to carbon heteroatom multiple bonds:

Mechanism of metal hydride reduction of saturated and unsaturated carbonyl compounds, acids, esters and nitriles, Wittig reaction mechanism of condensation reactions involving enolate, Knoevenagel, Mannich, Stobbe reactions. Hydrolysis of esters and amides, ammonolysis of esters.

UNIT- III : Elimination reactions:

The E2, E1 and E1cB mechanism. Orientation of double bond. Reactivity effect of substrate structures. Attacking base, the 'leaving group' and the medium. Mechanism and orientation on Pyrolytic elimination.

UNIT- IV: Pericyclic reactions :

Molecular orbital symmetry, frontier orbitals of ethylene, 1, 3- butadiene, 1,3,5-hexatriene and allyl system. Classification of pericyclic reactions. Woodward-Hoffmann *correlation* diagrams. FMO and PMO approach. *Electrocyclic* reactions- *conrotatory* and *disrotatory* motions, $4n$, $4n+2$ and *allyl* systems. Cycloadditions-antarafacial and Suprafacial 'additions, $4n$ and- $4n+2$ system, Sigmatropic rearrangements-suprafacial and antarafacial shift of H, sigmatropic shifts involving carbon moieties, 3, 3 and 5, 5 sigmatropic rearrangements. *Claisen*- Cope and *Aza*cope rearrangement. Fluxional tautomerism. Ene reaction.

BOOKS SUGGESTED

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, *Jerry March*, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg. Plenum.
3. A Guide Book to Mechanism in Organic Chemistry, Peter Sykes, Longman.
4. Structure and Mechanism in Organic Chemistry, C.K. Ingold, *Cornell University press*.
5. Organic Chemistry, R.T. Morrison and R.N. Boyd. Prentice Hall.
6. Modern Organic Reactions H.O. House, Benjamin
7. Principles of Organic Synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic and professional.
8. Pericyclic Reactions. S.M. Mukherji, Macmillan India.
9. Reaction Mechanism in Organic Chemistry S.M. Mukherji and S.P. Singh, Macmillan.
10. Stereochemistry of Organic Compounds D. Nasipuri, New Age International.

Physical -II (Paper III)**UNIT- I: Thermodynamics**

A-Classical Thermodynamics: Brief resume of concepts of laws of thermodynamics, free energy and chemical potential. Partial, molar properties partial molar free energy, partial molar volume and its determination, Gibbs –Duhem equation, concept of fugacity (by graphical method), Activity and Activity coefficient.

B-Statistical Thermodynamics: Concept of distribution, thermodynamic probability and most probable distribution. Canonical, grand canonical and microcanonical ensembles, The Boltzmann distribution law. Partition Functions-translational, rotational, vibrational and electronic partition function. Calculation of thermodynamic properties and equilibrium constant in terms of partition function. Fermi-Dirac and Bose-Einstein statistics.

C-Non-Equilibrium Thermodynamics: Thermodynamic criteria for non-equilibrium states, entropy production and entropy flow, Entropy balance equation for different irreversible processes (e.g. heat flow, chemical reaction etc). Transformation of the generalized fluxes and forces non-equilibrium stationary, phenomenological equations, Onsager's reciprocity relation, electro kinetic phenomena.

UNIT- II: Surface chemistry:

A-Adsorption: Gibbs adsorption isotherm estimation of surface area (BET equation), surface films on liquids (Electro kinetic phenomenon), catalytic activity at surfaces.

B-Micelles: Surface active agents, classification of surface active agents, micellization hydrophobic interactions, Critical micellar concentration (CMC) Factors affecting CMC of surfactants counter ion binding to Micelles, solubilization micro emulsion reverse micelles.

UNIT- III: Macromolecules:

Polymer-definition, types of polymer, electrically conducting fire resistant, liquid crystal polymer, Kinetics of polymerization, Molecular mass, number and mass average molecular mass, molecular mass determination (Osmometry, Viscometry diffusion and light scattering method) sedimentation chain configuration of macromolecules, Calculation of average dimension of various chain structures.

UNIT- IV: Electrochemistry:

Debye-Huckel theory of activity coefficient of electrolytic solutions, applicability and limitations of Debye-Huckel limiting law, ionic strength, structure of electrified interfaces, Helmholtz-Perrin, Guoy-Chapman and Stern models. Over potentials, exchange current density, derivation of Butler-Volmer equation, Tafel plot. Electrocatalysis, Influence of various parameters, Hydrogen electrode. Polarography theory, interpretation of a polarographic curve, instrumentation, limiting current, residual and charging current, diffusion current. Supporting electrolytes, Llovic equation, half wave potential and its significance. Introduction to corrosion, homogeneous theory, forms of corrosion, corrosion monitoring and prevention methods.

BOOKS SUGGESTED

1. Kinetics and Mechanism of Chemical Transformations J. Rajaraman and J. Kuriacose Me Millan.
2. Micelles, Theoretical and Applied Aspects, V. Moroi, Plenum.
3. Modern Electrochemistry Vol. I and Vol. II J.O.M. Bockris and A.K.N. Reddy, Plenum.
4. Introduction to Polymer Science V.R. Gowarikar, N.V. Vishwanathan and J. Sridhar, Wiley Eastern.
5. Physical Chemistry P.W. Atkins, ELBS.

Spectroscopy and Diffraction method (Paper IV)
[CHE-204] Credit- 4

UNIT- I: Electronic Spectroscopy

A- Atomic Spectroscopy

Energies of atomic orbitals, spectra of hydrogen atom and alkali metal atoms.

B- Molecular Spectroscopy

Franck-Condon principle, electronic spectra of polyatomic molecules. Emission spectra; radiative and non-radiative decay, internal conversion, spectra of transition metal complexes, charge-transfer spectra.

C- Photoelectron Spectroscopy

Basic principles; photo-electric effect, ionization process, Koopman's theorem. Photoelectron spectra of simple molecules, ESCA, chemical information from ESCA. Auger electron spectra of simple molecules.

UNIT- II : Nuclear Magnetic Resonance Spectroscopy

A- magnetic Resonance Spectroscopy

Nuclear spin, nuclear resonance, saturation, shielding of magnetic nuclei, chemical shift and its measurements, factors influencing chemical shift deshielding, spin-spin interactions, factors influencing coupling constant 'J' Effect of chemical exchange, spin decoupling, basic ideas about instrument, NMR studies of nuclei other than proton-¹³C, ¹⁹F and ³¹P. FT NMR, advantages of FT NMR use of NMR in medical diagnostics.

B-Nuclear Quadrupole Resonance Spectroscopy

quadrupole nuclei quadrupole moments, electric field gradient, coupling constant, splittings, Applications.

UNIT- III :

A- Electron Spin Resonance-Spectroscopy

Basic principles, Zero field splitting and Kramer's degeneracy. Factors affecting the 'g' value. Isotropic and anisotropic hyperfine coupling constants. measurement techniques and applications.

B-Photoacoustic Spectroscopy

Basic principles of photoacoustic spectroscopy (PAS), PAS- gases and condensed systems, chemical and surface applications.

UNIT- IV

A-X-ray Diffraction

Bragg method of X-ray structural analysis of crystals, index reflections. Structure of simple lattices and X-ray intensities.

B-Electron Diffraction

Scattering intensity vs. scattering angle, Wierl equation, measurement technique, elucidation of structure of simple gas phase molecules.

BOOK SUGGESTED

1. Modern Spectroscopy, J.M. Hollas, John Wiley.
2. Applied Electron Spectroscopy for Chemical Analysis ed. H. Windawi and F.L. Ho. Wiley interscience.
3. NMR, NQR, EPR and mossbauer Spectroscopy in inorganic Chemistry, R.V. Parish, Ellis Harwood.
4. Introduction to Molecular Spectroscopy G.M. Barrow, Mc Graw Hill.
5. Basic principles of Spectroscopy. R. Chang. Mc Graw Hill.
6. Theory and Applications of UV Spectroscopy, H.H. Jaffer and M. Orchin. IBH-oxford.
7. Introduction to Photoelectron Spectroscopy. P.K. Ghosh. John Wiley.
8. Introduction to Magnetic Resonance, A carrington and A.D. maclachalan, Harper & Row.

Semester-II

A complete record of practical exercises; in Inorganic, Organic and Physical Chemistry done during the session must be produced by the candidates in three separate Record Books at the time of practical examination.

Inorganic Chemistry

I. Quantitative estimation of two metal ions Cu-Ni, Ni-Zn, Cu-Fe etc involving volumetric and gravimetric methods. 20

II. Preparation of selective inorganic compounds (any one) 05

- (a) VO(acac)₂,
- (b) Na[Cr(NH₃)₂(SCN)₄]
- (c) K₃[Fe(C₂O₄)₃]
- (d) Prussian Blue
- (e) [Co(Py)₂Cl₂]
- (f) [Cu(NH₃)₄]SO₄.H₂O

Organic Chemistry**25****Quantitative Synthesis (Any Two)**

- I. Determination of the percentage or number of hydroxyl groups in an organic compound by acetylation method.
- II. Estimation of amine/phenols using bromate bromide solution or acetylation method.
- III. Determination of iodine and saponification values of an oil sample.
- IV. Determination of DO, COD and BOD of water sample.

Physical Chemistry (Any one)**25**

- I. Determination of molecular weight of nonvolatile and nonelectrolyte/electrolyte by cryoscopic method and to determine the activity coefficient of an electrolyte.
- II. Determination of the degree of dissociation of weak electrolyte and to study the deviation from ideal behaviour that occurs with a strong electrolyte.
- III. Determination of the velocity constant, order of the reaction and energy of activation for saponification of ethyl acetate by sodium hydroxide conductometrically.
- IV. Determination of solubility and solubility product of sparingly soluble salts (e.g PbSO₄, BaSO₄) conductometrically.
- V. Determination of the strength of strong and weak acids in a given mixture conductometrically.

VI. Viva 15

VII. Records 10

(Applications of Spectroscopy)

UNIT- I: Applications of Spectroscopy in Inorganic Chemistry

A- Vibrational Spectroscopy

Symmetry and shapes of AB_2 , AB_3 and AB_4 , mode of bonding of ambidentate ligands such as thiocyanate, nitrate, sulphate and urea, application of Raman spectroscopy particularly for the study of ionic equilibrium in solution.

B- Electron Spin Resonance Spectroscopy

Hyperline coupling, spin polarization for atoms and transition metal ions, spin-orbit coupling and significance of g-tensors, application to transition metal complexes having one unpaired electron and inorganic free radicals such as PH_4 , F_2^- and BH_3 .

C- Mossbauer Spectroscopy

Basic principles, spectral parameters and spectrum display. Application of the techniques to the studies of (1) bonding and structures of Fe^{2+} and Fe^{3+} compounds including those of intermediate spin and (2) Sn^{2+} and Sn^{4+} compounds nature of M-L bond, coordination number, structure.

UNIT- II: Applications of Spectroscopy-I in organic Chemistry

A- Ultraviolet and Visible Spectroscopy

Various electronic transitions (185-800 nm). Beer Lambert law. Effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes, ultraviolet spectra of aromatic and heterocyclic compounds.

B- Infrared Spectroscopy

Characteristic vibrational frequencies of aromatic compounds, alcohols, ethers, phenols and amines. Detailed study of vibrational frequencies of carbonyl compounds (ketones, aldehydes, esters, amides and acids), effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and Fermi resonances.

UNIT- III: Applications of Spectroscopy-II in organic Chemistry

A- Nuclear Magnetic Resonance Spectroscopy

General introduction and definition, chemical shift, spin-spin interaction, shielding mechanism, mechanism of measurement, chemical shift values and correlation for protons bonded to carbon (aliphatic, olefinic, aldehydic and aromatic) and other nuclei (alcohols, phenols, enols and carboxylic acids) chemical exchange, effect of deuteration, complex spin-spin interaction between two, three, four and five nuclei (first order spectra).

B- Carbon-13 NMR Spectroscopy

General considerations, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon), coupling constants.

UNIT- IV: Applications of Spectroscopy-III in organic Chemistry

Mass Spectrometry

Introduction, ion production- E1, C1, FD and FAB, factors affecting the fragmentation, ion analysis, ion abundance, mass spectral fragmentation of organic compounds, common functional groups, molecular ion peak, metastable peak, McLafferty rearrangement, Nitrogen rule.

Books suggested

1. Physical Methods for Chemistry, R.S.Dargy, Saunders Company
2. Structural Methods in Inorganic Chemistry, E.A.V. Ebsworth, Rankin and Craddock- ELBS.
3. Infrared and Raman Spectra Inorganic and Coordination Compounds, K. Nakamoto, Wiley.
4. Progress in Inorganic Chemistry, 8th edition, F. A. Cotton
5. Transition Metal Chemistry, ed R.L. Carlin, vol. 3, Dekker.
6. Inorganic Electronic Spectroscopy, A.P.B. Lever, Elsevier.
7. NMR, NQR, EPR and Mossbauer Spectroscopy in Inorganic Chemistry, R.V. Parish, Ellis Horwood.
8. Practical NMR Spectroscopy, M. L. Martin, J. J. Delpuech and G. J. Martin, Heyden.
9. Spectrometric Identification of Organic Compounds, R.M. Silverstein. G.C. Bassler and T.C. Morill, John Wiley.
10. Introduction to NMR Spectroscopy, R.J. Abraham, J. Fischer and P. Loftus, Wiley.
11. Application of Spectroscopy of Organic Compounds, J. R. Dyer, Prentice Hall,
12. Spectroscopic Methods in Organic Chemistry, D.H. Williams, I. Fleming, Tata Mc-Graw Hill.

[CHE-302]

Credit- 4

Section-‘A’:(Bioinorganic Chemistry)

UNIT- I

A- Metal Ions in Biological Systems

Essential and trace metals

B- Na /K Pump

Role of metal ions in biological processes

UNIT- II

A-Bioenergetics and ATP cycle

DNA polymerization, glucose storage, metal complexes in transmission of energy: chlorophylls

B- Transport and Storage of Dioxygen

Heme proteins and oxygen uptake, structure and function of haemoglobin, myoglobin, haemocyanins and hemerythrin model synthetic complexes in iron, cobalt and copper

UNIT- III

Electron Transfer in Biology

Structure and function of metalloproteins in electron transport processes-cytochromes and iron-sulphur proteins.

UNIT- IV

Nitrogenase

Biological nitrogen fixation, molybdenum nitrogenase

Books suggested

1. Principle of Bioinorganic Chemistry, S. J. Lippard and J.M. Berg, University Science Books
2. Bioinorganic Chemistry, Bertini H.B. Gray, S.J. Lippard and J.S. Valentine, University Science Books
3. Inorganic Biochemistry, vols. I and II ed. G.L. Eichhorn, Elsevier.
4. Progress in Inorganic Chemistry, Vols 18 & 38 ed. J.J. Lippard, Wiley.

Section-‘B’

Bioorganic Chemistry

UNIT- I

A-Introduction

Basic consideration Proximity effects and molecular adaptation

B-Enzymes

Introduction and historical perspective chemical and biological catalysis, remarkable properties of enzymes like catalytic power, specificity and regulation. Nomenclature and classification, Fischer's lock and key and Koshland's induced fit hypothesis, concept and identification of active site by the use of inhibitors. Enzyme kinetics, Michaelis-Menten and Lineweaver-Burk plots, reversible and irreversible inhibition.

UNIT- II

A-Mechanism of Enzyme Action

Transition-state theory, orientation and steric effect, acid-base catalysis, covalent catalysis, strain or distortion. Examples of some typical enzyme mechanisms for chymotrypsin, ribonuclease, lysozyme and carboxypeptidase-A.

B-Kinds of Reactions Catalysed by Enzymes

Nucleophilic displacement on a phosphorus atom, multiple displacement reactions and the coupling of ATP cleavage to endergonic processes. Transfer of sulphate, addition and elimination reactions, enolic intermediates in isomerization reactions, 1,3-cleavage and condensation, some isomerization and rearrangement reactions. Enzyme catalyzed carboxylation and decarboxylation.

UNIT- III

A- Co-Enzyme Chemistry

Cofactor as derived from vitamins coenzyme S, Prosthetic groups, apoenzymes structure and biological functions of coenzyme A thiamine pyrophosphate, pyridoxal phosphate. NAD, NADP, FMN, FAD, lipoic acid, vitamin B₁₂.

B-Enzyme Models.

Host-guest chemistry, chiral recognition and catalysis, molecular recognition, molecular asymmetry and prochirality. Biomimetic chemistry crown ethers, cryptates Cyclodextrins. cyclodextrin- based enzyme models calixarenes ionophores. micelles. synthetic enzymes or synzymes.

UNIT- IV

Biotechnological Applications of Enzymes

Large-scale production and purification of enzymes, techniques and methods of immobilization of enzymes, effect of immobilization on enzyme activity, application of immobilized enzymes, use of enzymes as targets for drug design. Clinical uses of enzymes, enzyme therapy.

Books Suggested

1. Bioorganic Chemistry: A chemical Approach to Enzyme Action, Hermann Dugas and C. Penny. Springer Verlag.
2. Understanding Enzymes, Trevor Palmer, Prentice Hall.
3. Enzyme Chemistry: Impact and Applications, Ed. Collin J. Suck, Chapman and Hall.
4. Enzyme Mechanisms De. M.I. Page and A. Williams. Royal Society of Chemistry
5. Fundamentals of Enzymology. N.C. Price and L. Stevens. Oxford University Press.
6. Immobilized Enzymes: An introduction and application in Biotechnology- Michael D. Trevan- John Wiley.
7. Enzyme Structure and Mechanism, A. Fersht, W.H. Freeman.
8. Biochemistry: The Chemical Reactions of Living Cells. D.E. Metzler. Academic Press.

[CHE-304]

Credit- 4

(Biophysical chemistry and Solid state chemistry)

UNIT- I:

A- Biological cell and its Constituents

Biological cell, structure and functions of proteins, enzymes. DNA and RNA in living systems. Helix coil transition.

B- Bioenergetics

Standard free energy change in biochemical reactions, exergonic, endergonic. Hydrolysis of ATP, synthesis of ATP from ADP.

UNIT- II

A-Biopolymer Interactions

Forces involved in biopolymer interactions. Electrostatic charges and molecular expansion, hydrophobic force, dispersion force interactions. Multiple equilibria and various types of binding processes in biological systems. Hydrogen ion titration curves.

B-Thermodynamics of Biopolymer Solutions

Thermodynamics of biopolymer solutions, osmotic pressure membrane equilibrium, muscular contraction and energy generation in mechanochemical system.

UNIT- III

A-Cell membrane and Transport of ions

Structure and functions of cell membrane, ion transport through cell membrane, irreversible thermodynamic treatment of membrane transport. Nerve conduction.

B- Biopolymers and their Molecular Weights

Evaluation of size shape molecular weight and extent of hydration of biopolymers by various experimental techniques. Sedimentation equilibrium, hydrodynamic methods, diffusion, sedimentation velocity viscosity electrophoresis and rotational motions.

UNIT- IV: Solid state chemistry

A- Solid State Reactions

General Principles for reaction between two solids: Reaction conditions, structural considerations, surface area, reactivity, kinetics of solid state reactions.

B- Crystal Defects and Non-Stoichiometry

Perfect and imperfect crystals, intrinsic and extrinsic defects- point defects, vacancies- Schottky defects and Frenkel defects. Thermodynamics of Schottky and Frenkel defect formation, non-stoichiometry and defects.

C- Electronic Properties and Band Theory

Metals, insulators and semiconductors, electronic structure of solids-band theory, band structure of metals, insulators and semiconductors, intrinsic and extrinsic semiconductors, doping semiconductors, p-n junctions, super conductors. Optical properties- optical reflectance, photoconduction- photoelectric effects.

Book Suggested

1. Principles of Biochemistry, A.L. Lehninger, Worth Publishers.
2. Biochemistry, L. Stryer, W.H. Freeman.
3. Biochemistry, J.David Rawn, Neil Patterson.
4. Biochemistry, Voet and Voet, John Wiley.
5. Outlines of Biochemistry, E.E. Conn and f.K. Stumpf, John Wiley.
6. Bioorganic Chemistry: A Chemical Approach to Enzyme Action, H.Dugas and C. Penny, Springer-Verlag.
7. Macromolecules: Structure and Functions, F. Wold, Prentice Hall.
8. Solid state Chemistry and its Applications, A.R. West, Plenum.
9. Principles of the Solid State, H. V. Keer, Wiley Eastern.
10. Solid State Chemistry, N. B. Hannay.
11. Solid State Chemistry, D.K. Chakrabarty, New Age International.

Section-‘A’
(Environmental Chemistry)
UNIT- I

A-Environment

Introduction, Composition of atmosphere, vertical temperature, heat budget of the earth atmospheric system, vertical stability atmosphere. Biogeochemical cycles of C, N, P, S and O. Biodistribution of elements.

B- Hydrosphere

Chemical composition of water bodies-lakes, streams, rivers and wet lands etc. Hydrological cycle. Aquatic Pollution- inorganic, organic, pesticide, agricultural industrial and sewage, detergents, oil spills and oil pollutants, Water quality parameters-dissolved oxygen biochemical oxygen demand, solids, metals, content of chloride, sulphate, phosphate, nitrate and micro-organisms. Water quality standards. Analytical methods for measuring BOD, DO, COD, F, Oils, metals (As, Cd, Cr, Hg, Pb, Se, etc.), residual chloride and chlorine demand. Purification and treatment of water.

UNIT- II

A- Soils

Composition micro and macro nutrients. Pollution-fertilizers, pesticides plastics and metals. Waste treatment.

B- Atmosphere

Chemical composition of atmosphere-particles, ions and radicals and their formation Chemical and photochemical reactions in atmosphere, smog formation, oxides of N.C.S.O. and their effect, pollution by chemicals, petroleum, minerals, chlorofluorohydrocarbons Green house effect, acid rain, air pollution controls and their chemistry. Analytical methods for measuring air pollution, Continuous monitoring instruments

UNIT- III

Industrial Pollution

Cement, sugar, distillery, drug, paper and pulp, thermal power plants, nuclear power plants, metallurgy, polymers, drugs etc. Radionuclide analysis. Disposal of wastes and their management.

UNIT- IV

Environmental toxicology

Chemical solutions to environmental problems, biodegrade ability, principles of decomposition better industrial processes. Bhopal gas tragedy, Chernobyl, three *mile* island. Sewofo and Minamata disasters.

Books Suggested

1. Environmental Chemistry, S.E. Manahan, Lewis Publishers.
2. Environmental Chemistry, Sharma & Kaur, Krishna Publishers
3. Environmental Chemistry, A.K. De, Wiley Eastern. .
4. Environmental Pollution Analysis, S.M. Khopkar, Wiley Eastern
5. Standard method of Chemical Analysis, *F.I. Welcher* Vol. III Van Nostrand Reinhold Co
6. Environmental Toxicology. *Ed.I. Rose*, Gordon and Breach Science Publication.
7. Elemental Analysis of Airborne Particles. Ed. S.Landsberger and M. Creatchman, Gordon and Breach Science Publication.
8. Environmental Chemistry. C. Baird. W.H. Freeman.

Semester-III, Paper-III

[CHE-303 B]

Credit- 2

**Section-‘B’
(Photo Chemistry)**

UNIT- I: Photochemical Reactions

Interaction of electromagnetic radiation with matter, types of excitations, fate of excited molecule, quantum yield, transfer of excitation energy actinometry.

UNIT- II: Determination of Radical Mechanism

Classification rate constants and life times of reactive energy, states-determination of rate constants of reactions. Effect of light intensity on the rate of photochemical reactions.

UNIT- III:

A-Photochemistry of Alkenes: Intramolecular reactions of the olefinic bond-geometrical isomerism, cyclization reactions, rearrangement of 1,4- and 1,5- dienes.

B- Photochemistry of Carbonyl Compounds

Intramolecular reactions of carbonyl compounds- saturated cyclic, acyclic β , γ unsaturated and α, β unsaturated compounds, cyclohexadienones.

Intermolecular cycloaddition reactions-dimerization and oxetane formation.

UNIT- IV Photochemistry of Aromatic Compounds

Isomerizations, additions and substitutions.

Books suggested

13. Fundamentals of Photochemistry, K.K. Rohtagi Mukherji, Wiley Eastern.
14. Essentials of Molecular Photochemistry, A. Gilbert, Baggot Balckwell Scientific Publications.
15. Introductory Photochemistry, A. Cox and T. Camp, McGraw Hill.
16. Photochemistry, R. P. Kundall and A. Gilbert, Thomson Nelson.
17. Organic Photochemistry, J. Coxon and B. Halton, Cambridge University Press

Practicals**Inorganic****25**

I. Preparation of selected inorganic compounds and structural elucidation on the basis of given spectra (IR, ESR and MS) Selection can be made from the following

- 1- Sodium amide
- 2- Dichlorophenyl borane PhBCl_2
- 3- Sn(IV) Iodide, Tin (IV) chloride and Tin (II) iodide
- 4- Ammonium hexachlorostannate $\text{CNH}_4\text{h SnCl}_6$,
- 5- Trichlorodiphenyl antimony (v) hydrate
- 6- Sodium Tetrathionate, $\text{Na}_2\text{S}_4\text{O}_6$
- 7- Metal Complexes of dimethyl Sulfoxide, CuCl_2 , 2DMSO.
- 8- Metal acetylacetonate.
- 9- Ion exchange separation of oxidation state of V.
- 10- Preparation of Fe(II) Chloride.
- 11- Phosphine Ph_3P and its transition metal complexes.
- 12- Ferrocene
- 13- Copper glycine Complex

II. Chromatographic Separations:

- a- Thin layer chromatographic separation of Nickel, Manganese Cobalt and Zinc. Determination of R_f values.
- b- Cadmium and Zinc
- c- Zinc and Magnesium

ORGANIC CHEMISTRY**25**

I. Qualitative Analysis

Separation and identification of components of a mixture of three organic compounds (three solids or two liquids and one solid, two solids and one liquid). Suitable derivatives to be prepared where possible. Purity of the separated components should also be checked on TLC plates, Chemical analysis.

II. Isolation of the following

- i) Caffeine from tea leaves.
- ii) Casein from milk
- iii) Lactose from milk
- iv) Nicotine dipicrate from tobacco
- v) Lycopene from tomatoes.

PHYSICAL CHEMISTRY**25****Thermodynamics:**

I- Determination of partial molar volume of solute (e.g, KCl) I and solvent in a binary mixture.'

II- Determination of the temperature dependence of the solubility of a compound in two solvents having similar inter molecular interactions (benzoic acid in water and in DMSO water mixture) and to calculate the partial molar heat solution

Spectroscopy

- i Determination of pK_a of an indicator (e.g. methyl red) 10 (a) aqueous and (b) micellar media.
- ii. Determination of stoichiometry and stability constant of inorganic (e.g. ferric-salicyclic acid) and organic (e. g. amine iodine) complexes. Characterization of the complexes by electronic and IR spectral data.

Viva voce

15

Records

10

Student has option to select any four papers out of Fifteen elective papers.

Elective Paper I

[CHE-400A]

Credit- 4

Organotransition metal chemistry

UNIT- I

A- Alkyls and Aryls of Transition metals

Types, routes of synthesis, stability and decomposition pathways, organocopper in organic synthesis

B- Compounds of Transition metal-Carbon Multiple Bonds

Alkylidenes, alkylidynes, low valent carbenes and carbenes-synthesis, nature of bond, structural characteristics, nucleophilic and electrophilic reactions on the ligands, role in organic synthesis.

UNIT- II

A- Transition Metal π -Complexes

Transition metal π -complexes with unsaturated organic molecules, alkenes, alkynes, allyldiene, dienyl, arene and trienyl complexes preparations, properties, nature of bonding and structural features, Important reaction relating to nucleophilic and electrophilic attack on ligands and to organic synthesis.

B- Transition metal compounds with Bonds to Hydrogen

UNIT- III

Homogeneous Catalysis

Stoichiometric reaction for catalysis, homogeneous catalytic hydrogenation, Ziegler-Natta polymerization of olefins, catalytic reaction involving carbon monoxide such as hydrocarbonylation olefin (oxo reaction), oxopalladation reaction, activation of C-H bond.

UNIT- IV

Fluxional Organometallic Compounds

Fluxionality and dynamic equilibria in compounds such as η^2 olefine, η^3 -allyl and dienyl complexes.

Books Suggested

1. Principles and application of organotransition Metal Chemistry, J.P. Collman, L.S. Hegsdus, JR Norton and R.G. Finke, University Science books
2. The organometallic chemistry of transition metals, R. H. Crabtree, John Wiley
3. Metallo-organic Chemistry, A. J. Pearson Wiley
4. Organometallic Chemistry, R. C. Mehrotra and A. Singh, New age International.

[CHE-400B]

Credit- 4

Bioinorganic and Supramolecular Chemistry.

UNIT- I

A-Metal Storage Transport and Biomineralization Ferritin, transferrin, and siderophores

B-calcium in Biology

Calcium in living cells, transport and regulation, molecular aspects of intramolecular processes, extracellular binding proteins.

UNIT- II

Metalloenzymes

Zinc enzymes-carboxypeptidase and carbonic anhydrase, Iron enzymes-catalase, peroxidase and cytochrome P-450, Copper- enzymes-superoxide dismutase, Molybdenum oxotransferase enzymes-xanthine oxidase, Coenzyme vitamin B12:

UNIT- III

A-Metal-Nucleic Acid Interactions

Metal ion and metal complex interactions, Metal complexes-nucleic acids

B- Metals in Medicine

Metal deficiency and disease, toxic effects of metals, metals for diagnosis and chemotherapy with particular reference to anticancer drugs.

UNIT- IV

supramolecular Chemistry

(A) molecular recognition: Molecular receptors for different types of molecules including aromatic substrates. Design and synthesis of coreceptor molecules and multiple recognition,

(B) Supramolecular reactivity

(C) Transport processes and carrier design

(D) Supramolecular devices: supramolecular photochemistry, supramolecular electronic, ionic and switching devices, Some example of self-assembly in supramolecular chemistry.

Books Suggested

1. Principles of Bioinorganic Chemistry S J. Lippard and J. M. Berg University Science Books.
2. Bioinorganic Chemistry. T. Bertini. R.B. Gray. S.J. Lippard J.S. Valentine, University Science Books.
3. Inorganic Biochemistry vols I and II. ed. G.T. Eichborn, Elsevier.
4. Progress in Inorganic Chemistry. Vols 18 and 38 ed. J.J. Lippard. Wiley.
5. Supramolecular Chemistry. J. M. Lehn, VCH

Photoinorganic chemistry**UNIT- I****Basics of Photochemistry**

Absorption excitation, photochemical laws, quantum yield electronic excited states, life times- measurements of the times flash photolysis, stopped flow techniques. Energy dissipation by radiative and non-radiative processes, absorption spectra, Franck -Condon principle, photochemical stages-primary and secondary processes.

UNIT- II**A- Properties of excited states**

Structure, dipole moment, acid-base strengths, reactivity, photochemical kinetics calculation of rates of radiative processes. Biomolecular deactivation-quenching.

B- Excited states of metal complexes

Excited states of metal complexes: comparison with organic compounds, electronically excited states of metal complexes, charge transfer spectra, charge transfer excitations methods for obtaining charge-transfer spectra.

UNIT- III**A- Ligand field photochemistry**

Photosubstitution photooxidation and photoreduction, lability and selectivity, zero vibrational levels of ground state and excited state, energy content of excited state, zero, zero spectroscopic energy, Development of the equations for redox potentials of the excited states.

B- Redox reactions by excited metal complexes

Energy transfer under conditions of weak interaction and strong interaction-exciplex formation; conditions of the excited states to be useful as redox reactants, excited electron transfer, metal complexes as attractive candidates (2,2-bipyridine and 1,10-phenanthroline complexes), illustration of reducing and oxidising character of ruthenium ⁺² (bipyridil complex, comparison with Fe (bipy)₃ role of spin coupling life time of these complexes. Application of redox processes of low energy reactants into high energy products, chemical energy into light.

UNIT- IV**Metal complex sensitizers**

Metal complex sensitizer, electron relay, metal colloid systems, semiconductor supported metal or oxide systems, water photolysis nitrogen fixation and carbon dioxide reduction.

Books suggested

1. Concepts of inorganic photochemistry, A.W. Adamson and P.D. Fleischauer, Wiley.
2. Inorganic photochemistry, J.Chem.Educ. Vol. 60, no, 10, 1983
3. Progress in inorganic chemistry, vol, 30. Ed. S.J. Lippard, Wiley.
4. Coordination chem. revs. 1981, vol.39, 121, 131:1975, 15.321:1990, 97313.
5. photochemistry of coordination compounds. V. Balzan and V. Carassiti, academic press.
6. Elements of inorganic photochemistry. G.J. Ferraudi, Wiley.

Elective Paper IV

[CHE-400 D]

Credit- 4

Analytical chemistry

UNIT- I

Introduction

Role of analytical chemistry. Classification of analytical methods-classical and instrumental. Types of instrumental analysis, selecting an analytical method. Neatness and cleanliness, laboratory operations and practices, analytical balance. Techniques of weighing, errors. Volumetric glassware-cleaning and calibration of glassware. Sample preparations, dissolution and decompositions. Gravimetric techniques. Selecting and handling of reagents. Laboratory notebooks. Safety in the analytical laboratory.

UNIT- II

Errors and evaluation

Definition of terms in mean and median. Precision-standard deviation, relative standard deviation. Accuracy-absolute error, relative error. Types of error in experimental data determinate (systematic), indeterminate (of random) and gross. Sources of errors and the effects upon the analytical results. Methods for reporting analytical data. Statistical evaluation of data-indeterminate errors. The uses of statistics.

UNIT- III

A- Food analysis

Moisture, ash, crude protein, fat, crude fibre, carbohydrates, calcium, potassium, sodium and phosphate. Food adulteration-common adulterants in food, contamination in foodstuffs. Microscopic examination of food for adulterants. Pesticide analysis in food products. Extraction and purification of sample. HPLC, gas chromatography for organophosphates. Thin layer chromatography for identification of chlorinated pesticides in food products.

B- Analysis of water pollution

Origin of waste types water pollutants and effects. Sources of water pollution domestic, industrial, agricultural, soil and radioactive waste as sources of pollution, objectives of analysis-parameter for analysis-colour turbidity total solid conductivity, acidity, alkalinity, hardness, chloride, sulphate, fluoride, silica, phosphates and different forms of nitrogen. Heavy metal pollution, public health significance of Cadmium, Chromium, copper, lead, zinc, manganese, mercury and arsenic. General survey of instrumental technique for the analysis of heavy metals in aqueous systems. Measurement at DO, BOD, COD. Pesticides as water pollutants and analysis. Water pollution law and standards.

UNIT- IV

Analysis of soil, fuel, body fluids and drugs

- (a) Analysis of soil: moisture, pH, total nitrogen, phosphorus, silicon, lime, magnesia, manganese, sulphur and alkali salts.
- (b) Fuel analysis: solid, liquid and gas, ultimate and proximate analysis-heating and value grading of coal. Liquid fuels-flash point, aniline point, octane number and carbon residue. Gaseous fuels-producer gas and water gas-calorific value.
- (c) Chemical chemistry: Composition of blood collection and preservation of samples. Clinical analysis, serum electrolytes, blood glucose, blood urea, nitrogen, uric acid, albumin, globulins, barbiturates, acid and alkaline phosphatases. Immunoassay: principles of radioimmunoassay (RIA) and applications. The blood gas analysis trace elements in the body.
- (d) Drug analysis: Narcotic and dangerous drugs. Screening by gas and thin layer chromatography and (spectrophotometric) measurements.

Books suggested

1. Analytical chemistry, G.D. Christian, J. Wiley.
2. Fundamentals of analytical chemistry, D.A. Skoog, D.M. West and F.J. Holler, W.B. Saunders.
3. Analytical chemistry principles, J.S. Kennedy, W.B. Saunders.
4. Analytical chemistry principles and techniques, L.G. Hargis, Prentice Hall.
5. Principles of instrumental analysis, D.A. Skoog, J.L. Loary, W.B. Saunders.
6. Principles of instrumental analysis, D.A. Skoog, W.B. Saunders.
7. Quantitative analysis, R.A. Day Jr and A.L. Underwood, Prentice Hall.
8. Environmental solution analysis, S.M. Khopkar, Wiley Eastern.
9. Basic concepts of analytical chemistry, S.M. Khopkar, Wiley Eastern.
10. Handbook of instrumental techniques for analytical chemistry, F. Settle, Prentice Hall.

Inorganic Polymers

UNIT- I

Basics

Importance of polymers. Basic concepts: Monomers, repeat units, degree of polymerization. Linear, branched and network polymers, Classification of polymers Polymerization: condensation, addition, radical chain-ionic and co-ordination and copolymerization. Polymerization conditions and polymer reactions. Polymerization in homogeneous and heterogeneous systems.

UNIT- II

Polymer Characterization

Polydispersion-average molecular weight concept. Number, weight and viscosity average molecular weights. Polydispersity and molecular weight distribution. The practical significance of molecular weight. Measurement of molecular weights. End group, viscosity. light scattering, osmotic and ultracentrifugation methods. Analysis and testing of polymers. Chemical analysis of polymers, spectroscopic methods, X-ray diffraction study. Microscopy. Thermal analysis and physical testing-tensile strength. Fatigue, impact, tear resistance. Hardness and abrasion resistance.

UNIT- III

Structure and Properties

Morphology and order in crystalline polymers-configurations of polymer chains. Crystal structures of polymers. Morphology of crystalline polymers, strain-induced morphology, crystallization and melting. Polymer structure and physical properties-crystalline melting point T_m -melting points of homogeneous series, effect of chain flexibility and other steric factors, entropy and heat of fusion. The glass transition temperature, T_g -Relationship between T_m and T_g , Effects of molecular weight, diluents, chemical structure, chain topology, branching and cross linking. Property requirements and polymer utilization.

UNIT- IV

A-Polymer Processing

Plastics, elastomers and fibers Compounding Processing techniques Calendering diecasting, rotational casting film casting injection moulding. blow moulding. extrusion moulding thermolforming, foaming, reinforcing and fibre spinning.

B- Properties of Commercial Polymers

Polyethylene, Polyvinyl chloride polyamides polyesters, phenolic resins. epoxy resins and silicone polymers. Functional polymers, fire retarding polymers and electrically conducting polymers. Biomedical polymers-contact lens, dental polymers, artificial heart. kidney, skin and blood cells.

Books Suggested

1. Textbook of Polymer Science, F.W. Billmeyer Jr. Wiley.
2. Polymer Science, V.R. Gowariker, N.V. Viswanathan and I Sreedhar, Wiley-Eastern.
3. Functional Monomers and Polymers. K. Takemoto, Y. Inaki and RM. Rttanbrite.
4. Contemporary Polymer Chemistry, HR. Alcock and F.W. Lambe, Prentice Hall.
5. Physics and Chemistry of Polymer, I.M.G. Cowie, Blackie Academic and Professional.

Elective Paper VI

[CHE-400 F]

Credit- 4

Organic Synthesis-I UNIT- I

Organometallic reagents

Principles, preparations, properties and applications of the following in organic synthesis with mechanistic details.

A. Group I and II metal organic compounds

Li, Mg, Hg, Cd, Zn compounds.

B. Transition metals

Cu, Pd, Ni, Fe, Co, Ti compounds.

UNIT- II

A-Oxidation

Introduction different oxidative processes.

Hydrocarbons-alkenes, aromatic rings, saturated C-H groups (activated and unactivated). Alcohols, diols, aldehydes, ketones, ketals and carboxylic acid.

Amines, hydrazines and sulphides.

Oxidation with ruthenium tetroxide, iodobenzene diacetate and thallium(III) nitrate.

B- Reduction

Introduction, different reductive processes.

Hydrocarbons-alkanes, alkynes and aromatic rings.

Carbonyl compound-aldehydes, ketones, acids and their derivatives. Epoxides.

Nitro, nitroso, azo and oxime groups. Hydrogenolysis.

UNIT- III

Rearrangements

General mechanistic consideration: nature of migration, migratory aptitude, memory effects.

A detailed study of the following rearrangements

Pinacol-pinacolone, Wagner-Meerwein, Demjanov, Benzil-Benzilic acid, Favorskii, Aarndt-Eistert synthesis, Neber, Beckmann, Curtius, Schmidt, Baeyer-Villiger, Shapiro reaction.

UNIT- IV

Metalloenes, Nonbenzenoid Aromatic and polycyclic aromatic compound

General consideration, synthesis and reactions of some representative compounds.

Books suggested

1. Modern synthetic reactions, H.O. House, W.A. Benjamin.
2. Some modern methods of organic synthesis, W. Carruthers, Cambridge Univ. Press.
3. Advanced organic chemistry, reactions mechanisms and structure, J. March, John Wiley.
4. Principles of organic synthesis, R.O.C. Norman and J.M. Coxon, Blackie academic and professional.
5. Advanced organic chemistry part B, F.A. Carey and R.J. Sundberg. Plenum Press.
6. Rodd's chemistry of carbon compounds, Ed. S. Coffey Elsevier.

Semester- IV
Elective Paper VII
[CHE-400 G]

Credit- 4

Disconnection approach

Organic Synthesis II

UNIT- I

An introduction to synthons and synthetic equivalents, disconnection approach, functional group interconversions, the importance of the order of events in organic synthesis, one group C-X and two group C-X disconnections, chemoselectivity, reversal of polarity, cyclisation reactions, amine synthesis.

UNIT- II

A-Protecting groups

Principle of protection of alcohols, amine, carbonyl and carboxyl groups.

B-one group C-C disconnections

Alcohols and carbonyl compounds, regioselectivity. Alkene synthesis, use of acetylenes and aliphatic nitro compounds in organic synthesis.

UNIT- III

Two group C-C disconnections

Diels-Alder reaction, 1,3-disubstituted compounds, $\alpha\beta$ unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-disubstituted compound. Michael addition and Robinson annelation.

UNIT- IV

Ring synthesis

Saturated heterocycles, synthesis of 3,4,5 and 6 membered rings, aromatic heterocycles in organic synthesis.

Synthesis of some complex molecules

Application of the above in the synthesis of following compounds: camphor, longifoline, cortisone, reserpine, vitamin D, juvabione, aphidicolin and fredericamycin A.

Books suggested

1. Designing organic synthesis, S. Warren, Wiley.
2. Organic synthesis-concept, methods and starting materials, J. Fuhrhop and G. Penzillin, Verlag VCH.
3. Some modern methods of organic synthesis, W. Carruthers, Cambridge Univ. Press.
4. Modern synthetic reactions, H.O. House, W.A. Benjamin.
5. Advanced organic chemistry: reactions mechanism and structure, J. March, Wiley.
6. Principles of organic synthesis, R. Norman, J.M. Coxon, Blackie academic and professional.
7. Advanced organic chemistry part B. F.A. Carey and R.J. Sundberg, Plenum press.

Heterocyclic chemistry
UNIT- I

A- Nomenclature of Heterocycles

Replacement and systematic nomenclature (Hantzsch Widman system) for monocyclic, fused and bridged heterocycles.

B- Aromatic heterocycles

General chemical behavior of aromatic heterocycles, classification (Structural type), criteria of aromaticity (bond lengths ring current and chemical shifts in ¹H-NMR- spectra. Empirical resonance energy) resonance energy, delocalization energy and deqar resonance energy, diamagnetic susceptibility exaltations). Heteroaromatic reactivity and tautomerism in aromatic heterocycles.

C-Non-aromatic Heterocycles

Strain bond angle and torsional strains and their consequence in small ring heterocycles.

Conformation of six- membered heterocycles with reference to molecular geometry, barrier to ring inversion, pyramidal inversion and 1,3- diaxial interaction. Stereo-electronic effects-anomeric and related effects. Attractive interactions-hydrogen bonding and intermolecular nucleophilic interactions.

UNIT- II

A- Heterocyclic Synthesis

Principles of heterocyclic synthesis, cyclization reactions and cycloaddition reactions.

B- Small Ring Heterocycles

Three membered and four membered heterocycles-synthesis and reaction of aziridine, oxiranes. Thiranes, azetidines, oxetanes and thietanes.

UNIT- III

A- Benzo-Fused Five-membered Heterocycles

Synthesis and reactions including medicinal application of benzopyrroles, benzofurans and benzothiophenes.

B- Meso-ionic Heterocycles

General classification, chemistry of some important mesoionic heterocycles of type A and B and their applications.

C- Six-membered Heterocycles with one Heteroatoms

Synthesis and reaction of pyrylium salts and pyrones and their comparison with pyridinium and thiopyrylium salts and pyridines.

Synthesis and reactions of quinolinizinium and benzpyrinium salts, coumarins and chromones.

UNIT- IV

A- Six-membered Heterocycles with two or more Heteroatoms

Synthesis and reaction of diazines, triazines and thiazines.

B- Seven-and large –Membered Heterocycles

Synthesis and reaction of azepines, oxepines, thiepinines, diazepines, thiazepines, azocine, diazocines, dioxocines and dithiocines.

Books Suggested

1. "Heterocyclic Chemistry" Vol, 1-3 R.R. Gupta, M.Kumar and V. Gupta, Springer, Verlag
2. The Chemistry of Heterocycles, T. Eicher and S. Hauptmann, Thieme.
3. Heterocyclic chemistry, J.A. Joule, K. Mills and G.F.Smith, Chapman and Hall.
4. Heterocyclic chemistry, T.L. Gilchrist, Longman Scientific Technical.
5. Contemporary Heterocyclic chemistry. G.R. Newkome and W.W. Poaudler, Wiley-Inter Science.
6. An Introduction to the Heterocyclic Compounds, R.M. Acheson, John Wiley.
7. Comprehensive Heterocyclic Chemistry, A. R. Katritzky and C.W. rees. Eds. Pergamon Press.

Trapezoids and Carotenoids**Chemistry of Natural products****UNIT- I**

Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule. Structure determination stereochemistry, biosynthesis and synthesis of the following representative molecules: Citral Geraniol, α -terpeneol, Menthol, farnesol, Ziniberene, Santonin, Phytol, Abietic acid and β -Carotene.

UNIT- II**A- Alkaloids**

Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring role of alkaloids in plants. Structure, stereochemistry, synthesis and biosynthesis of the following : ephedrine, (+)-Conine, Nicotine, Atropine, Quinine and morphine.

B- Steroids

Occurrence, nomenclature, basic skeleton, Diel's hydrocarbon and stereochemistry.

Isolation, structure determination and synthesis of Cholesterol, Bile acids, Androsterone, Testosterone, Estrone, Progesterone, Aldosterone, Biosynthesis of steroids.

UNIT- III**A- Plant Pigments**

Occurrence, nomenclature and general methods of structure determination, Isolation and synthesis of Apigenin, Luteolin, quercetin, myrcetin, Quercetin 3-glucoside, Vitexin Diadzein, Butein, Aureusin, Cyanidin-7-arabinoside, acid pathway.

B- Porphyrins

Structure and synthesis of Haemoglobin and Chlorophyll.

UNIT- IV**A- Prostaglandins**

Occurrence, nomenclature, classification, biogenesis and physiological effects, Synthesis of PGE₂ and PGF_{2 α}

B- Pyrethroids and Rotenones

Synthesis and reaction of Pyrethroids and Rotenones (For structure elucidation, emphasis is to be placed on the use of spectral parameters wherever possible).

Books Suggested

1. Natural Products: Chemistry and Biological Significance,
2. Mann R.S. Davidson, J.B. Hobbs, D.V. Banthorpe and I.B. Harborne, Longman, Essex.
3. Organic Chemistry, Vol-2, I.L. Finar, ELBS
4. Stereoselective Synthesis: A Practical Approach, M. Nogradi, VCH.
5. Rodd's Chemistry of Carbon Compounds, Ed. S. Coffey, Elsevier.
6. Chemistry, Biological and Pharmacological Properties of Medicinal Plants from the Americas, Ed Kurt Hostettmann, M.P. Gupta and A. Marston, Harwood Academic Publishers.
7. Introduction of Flavonoids, B.A. Bohm, Harwood Academic Publishers.
8. New Trends in Natural Product Chemistry, Atta-ur-Rahman and M.I. Choudhary, Harwood Academic Publishers.
9. Insecticides of Natural Origin, Sukh Dev, Harwood Academic Publishers.

Medicinal Chemistry**UNIT- I****A- Drug design :**

Relationship between Chemical structure and biological activity (SAR). Receptor site theory approach to drug design. Introduction to combinatorial synthesis in drug discovery.

B- Pharmacokinetics:

Introduction of drug absorption, desorption, elimination using pharmacokinetics, important pharmacokinetics parameters in defining drug disposition and in therapeutics. Mention of uses of pharmacokinetics in drug development process.

UNIT- II**A- Antineoplastic Agents:**

Introduction, cancer chemotherapy, role of alkylating agents and antimetabolites in treatment of cancer. Synthesis of mechlorethamine, cyclophosphamide, melphan, mechlorethamine, cyclophosphamide melphalan, uracil, mustards, and 6- mercaptopurine.

B- Cardiovascular Drug:

Introduction, cardiovascular diseases, drug inhibitors of peripheral sympathetic function central intervention of cardiovascular output. Directacting arteriolar dilators. Synthesis of amyl nitrate sorbitrate, deltizem, quitrudine, veramil and atenolol.

UNIT- III**A- Local Antiinfective Drugs:**

Introduction and general mode of action. Synthesis of sulphonamides, turatolidone, ciprofloxacin, norfloxacin, dopone, aminosalicic acid, isoniazid, ethionamid, thambutal, fluconazole, arisefulvin, chlorogenin, primaquin.

B- Psychoactive Drugs- The Chemotherapy of mind

Introduction, neurotransmitters, CNS depressant, general anaesthetics, mode of action of hypnotics, sedatives, antianxiety drugs, Antipsychotic drugs- the neuroleptics, antidepressant, butyrophenones, serendipity and drug development. Synthesis of diazepam, oxazepam, chlorazepam, alprazolam, phenytoin 2 barbiturates.

UNIT- IV**Antibiotics:**

Cellwall biosynthesis inhibitors, β -lactam rings antibiotics inhibiting protein synthesis, synthesis of penicillin, chloramphenicol, cephalosporin and streptomycin.

Books Suggested

1. Introduction to Medical Chemistry, A. Gringuage, Wiley-VCH.
2. Wilson and Gisvold's Text Book of Organic Medicinal and Pharmaceutical Chemistry. Ed. Robert F. dorge
3. An Introduction to Drug Design, S.S. Pandeya and J.R. Dimmock, New Age International.
4. Burger's Medicinal Chemistry and Drug Discovery, Vol-I (Chapter-9 and Ch-14) Ed.M.E. Wolff, John Wiley.
5. Goodman and Gilman's Pharmacological Basis of Therapeutics, Mc Graw-Hill.
6. The Organic Chemistry of Drug Design and Drug Action, R.B. Silverman, Academic Press.
7. Strategies for Organic Drug Synthesis and Design. D. Lednicer, John Wiley.

Physical Organic Chemistry**UNIT- I****Concepts in Molecular Orbital (MO) and Valence bond (VB) Theory**

Introduction. to Huckel molecular orbital (MO) method as means to explain modern theoretical methods. Advanced techniques in PMO and FMO theory. Molecular mechanics. semiempirical methods and *ab initio* and density functional methods. Scope and limitation of several computational programmes. Quantitative MO theory-Huckel molecular orbital (HMO) method as applied to ethene, allyl and butadiene. Qualitative MO theory-ionisation potential. Electron affinities MO energy levels. Orbital symmetry. Orbital interaction diagrams. MO of simple organic systems such as ethene, allyl, butadiene, methane and methyl group. Conjugation and hyperconjugation. Aromaticity. Valence bond (VB) configuration mixing diagrams. Relationship between VB configuration mixing and resonance theory. Reaction profiles. potential energy diagrams. Curve crossing model- nature of activation barrier in chemical reactions.

UNIT- II**A- Principles of Reactivity**

mechanistic significance of. entropy, enthalpy and Gibbs free energy. Arrhenius equation Transition state theory. Uses of activation parameters, Hammond's postulate, Bell-Evans Polanyi principle. Potential energy surface model. Marcus theory of electron transfer. Reactivity and selectivity principles.

B- Kinetic Isotope Effect

Theory of isotope effects Primary and secondary kinetic isotope effects. Heavy atom isotope effects. Tunneling effect. Solvent effects.

C- Structural Effects on Reactivity

Linear free energy relationships (LFER). The Hammett equation, substituent constants, theories of substituent effects. Interpretation of ρ -values. Reaction constant ρ -Deviations from Hammett equation. Dual-parameter correlations, inductive substituent constant. The Taft model σ_1 and σ_R scales

UNIT- III**A- Solvation and Solvent Effects**

Qualitative understanding of solvent-solute effects on reactivity. Thermodynamic measure of solvation. Effects of solvation on reaction rates and equilibria. Various empirical indexes of solvation based on physical properties, solvent-sensitive reaction rate, spectroscopic properties and scales for specific solvation. Use of solvation scales in mechanistic studies Solvent effects from the curve-crossing model.

B- Acids, Bases, Electrophiles, Nucleophiles and Catalysis

Acid-base dissociation. Electronic and structural effects, acidity and basicity. Acidity functions and their applications. Hard and soft acids and bases. Nucleophilicity scales Nucleofugacity. The α -effect. Ambivalent nucleophiles. Acid base catalysis-specific and general catalysis. Brønsted catalysis. Nucleophilic and electrophilic catalysis by non-covalent binding-micellar catalysis.

C- Steric and Conformational Properties

Various type of steric strain and their influence on reactivity. Steric acceleration. Molecular measurements of steric effects upon rate. Steric LFER. Conformational barrier to bond rotation-spectroscopic detection of individual conformers. Acyclic and monocyclic systems. Rotation around partial double bonds. Winstein-Holness and Curtin-Hammett principle.

D- Nucleophilic and Electrophilic Reactivity

Structural and electronic effects on S_N1 and S_N2 reactivity. Solvent effects. Kinetic isotope effects Intramolecular assistance. Electron transfer nature of S_N reaction. Nucleophilicity and S_N2 reactivity based on curve crossing model. Relationship between polar and electron transfer reactions. S_N1 mechanism. Electrophilic reactivity, general mechanism. Kinetic of S_E2 -Ar reaction. Structural effects on rate and selectivity. Curvecrossing approach to electrophilic reactivity.

UNIT- IV**A- Radical and Pericyclic Reactivity**

Radical stability, polar influence, solvent and steric effects. A curve crossing approach to radical; addition, factors effecting barrier heights in additions, regioselectivity in radical reactions. Reactivity, specificity and periselectivity in pericyclic reactions.

B- Supramolecular Chemistry

Properties of covalent bonds-bond length, inter-bond angles, force constant, bond and molecular dipole moments. Molecular and bond polarizability, bond dissociation enthalpy, entropy. Intermolecular forces hydrophobic effects. Electrostatic, induction, dispersion and resonance energy, magnetic interactions, magnitude of interaction energy, forces between macroscopic bodies, medium effects, Hydrogen bond. Principles of molecular association and organisation as exemplified in biological macromolecules like enzymes, nucleic acids, membranes and model systems like micelles and vesicles. Molecular receptor and design principles. Supramolecular reactivity and catalysis. Molecular channels and transport processes. Molecular devices and nanotechnology.

Books Suggested

1. Molecular Mechanics, U.B. Burkert and N.L. Allinger, ACS Monograph 177, 1982.
2. Organic Chemists Book of Orbitals, L. Salem and W.L. Jorgensen, Academic Press.
3. Mechanism and theory in Organic Chemistry, T.H. Lowry and K.C. Richardson, Harper and Row.
4. Introduction to Theoretical Organic Chemistry and Molecular Modeling, W.B. Smith, VCH, Weinheim
5. Physical Organic Chemistry, N.S. Isaacs, ELBS/Longman.
6. Supramolecular Chemistry: Concept and perspectives, J.M. Lehn, VCH
7. The Physical Basis of Organic Chemistry, H. Maskill, Oxford University press.

Semester- IV
Elective Paper XII
[CHE-400 L]

Credit- 3

A- Multiphase Materials

Chemistry of Materials
UNIT- I

Ferrous alloys: Fe-C phase transformation in ferrous alloys: stainless steels, non-ferrous alloys, properties of ferrous and non-ferrous alloys and their applications.

B- Glasses, Ceramics, Composites and nanomaterials

Glassy state, glass formers and glass modifiers, applications. Ceramic structures, mechanical properties, clay products. Refractories, characterizations, properties and application. Microscopic composites; dispersion-strengthened and particle-reinforced, fibre-reinforced composites, macroscopic composite. Nanocrystalline phase, preparation procedures, special properties. applications.

C- Thin films and Langmuir-Blodgett Films

Preparation techniques; evaporation/sputtering. chemical processes, MOCVD, sol-gel etc. Langmuir-Blodgett (LB) film, growth techniques, photolithography, properties and applications of thin and LB films.

UNIT- II

A- Liquid Crystals

mesomorphic behaviour, thermotropic liquid crystals, positional order, bond orientational order, nematic and smectic mesophases; smectic-nematic transition and clearing temperature-hornotropic, planar and schlieren textures, twisted nematics, chiral nematics, molecular arrangement in smectic A and smectic C phases, optical properties of liquid crystals. Dielectric susceptibility and dielectric constants. Lyotropic phases and their description of ordering in liquid crystals.

B- Polymeric Materials

Molecular shape, structure and configuration, crystallinity, and their applications. conducting and ferro-electric polymers.

UNIT- III

A- Ionic Conductors

Types of ionic conductors. mechanism of ionic conduction, interstitial jumps (Frenkel). vacancy mechanism. diffusion superionic conductors. phase transitions and mechanism of conduction in superionic conductors examples and applications of ionic conductors

B- High T_c Materials

Defect perovskites, high T_c superconductivity in cuprates, preparation and characterization of 1-2-3 and 2-1-4 materials, normal state properties; anisotropy; anisotropy; temperature dependence of electrical resistance; optical phonon modes, superconducting state; heat capacity; coherence length, elastic constants, position lifetimes, microwave absorption-pairing and multigap structure in high T_c materials applications of high T_c materials.

UNIT- IV

A- Materials for solid State Devices

Rectifiers, transistors, capacitors-IV - V compounds, low- dimensional quantum structures; optical properties.

B- Organic Solids, Fullerenes, Molecular Devices;

Conducting organics, organic superconductors, magnetism in organic materials. Fullerenes-doped, fullerenes as superconductors. Molecular rectifiers and transistors, artificial photosynthetic devices. optical storage memory and switches-sensors. Nonlinear optical materials: nonlinear optical effects. second and third order-molecular hyperpolarisability and second order electric susceptibility-materials for second and third harmonic generation.

Books Suggested

1. Solid State Physics, N.W. Ashcroft and N.D. Mermin Saunders College.
2. Material Science and Engineering. An Introduction. W.D. Callister. Wiley.
3. Principles of the Solid State, H.v. Keer. Wiley Eastern.
4. Materials Science, J.e. Anderson, K.D. Leaver, J.M. Alexander and R.D. Rawlings, ELBS
5. Thermotropic Liquid Crystals Ed. G.W. Gray. John Wiley.
6. Handbook of Liquid Crystals. Kelker and Hafz. Chemie Verlag.

Semester- IV
Elective Paper XIII

UNIT- I: Fortran/C programming and Numerical methods

a. Solution of Equations

b. Linear simultaneous Equations

c. Eigenvalues and Matrix Diagonalization , Jacobi and Householder methods, analysis or errors.

d. Interpolation

e. Numerical Differentiation

Solution of simple differential equations by Taylor series and Runge-Kutta methods.

f. Numerical Integration

Newton-Cotes formulae, Romberg integration errors in integration formulae.

The students should develop computer programs for some of the above numerical methods.

The students are expected to get hands or experience of running a few selected advanced level scientific software packages after a brief introduction to the basic theory and methodology. ad intio quantum chemical packages such as GAUSSIAN/GAMES with carefull designed exercises for illustrating various features of the packages Semlempirical/Dynamica/Simulation packages such as MOPAC, CHARM. AMBER. QUANTA etc. Basic ideas on structure activity relation. drug and catalysis design etc. '

UNIT- IV: Project

The students will develop utilities such as analysis of spectra, simulation programmes which will supplement laboratory or theory exercises in physical, organic, inorganic chemistry or biochemistry. The list is only indicative and a variety of small projects designed by the teacher based on the interest of the student and capabilities should be worked out.

1. Computational Chemistry, A.C. Norris, John Wiley.
1. Computer Programming in FORTRAN 77. R. Rajaraman. Prentice Hall.
2. Numerical Analysis - A Practical Approach. M.J. Maron. John Wiley.
3. Numerical Methods for Scientists and Engineers. H.M. Antra. Tata Mc Graw Hill.

[CHE-400 N]

Credit- 3

Advanced Quantum Chemistry

(Pre-requisite; Mathematics at least up to 'First Year B.Sc. level is necessary. At least one PC among 4 students should be available)

UNIT- I

A-Theoretical and Computational Treatment of Atoms and Molecules. Hartree-Fock Theory

Review of the principles of quantum mechanica, Born Oppenheimer approximation. Slater-Condon Rules, Hartree-Fock equation, Koopmans and Brillouin theories, Roothaan equation, Gaussian basis sets.

B- Configuration Interaction and MC-SCF

Introduction to CI, full and truncated CI theories, size consistency. Introductory treatment of coupled cluster and MC- SCF methods.

UNIT- II

Semi-Empirical Theories

A review of the Huckel, EHT and PPP treatments, ZDO approximation, detailed treatment of CNDO and INDO theories. A discussion of electronic energies and properties. An introduction to MOPAC and AMI with hands on experience on personal computer.

UNIT- III

Density Functional Theory

Derivation of Hohenberg-Kohn theorem, Kohn-Sham formulation, N- and V-representabilities; review of the performance of the existing local (e.g. Slater X α and other methods) and non-local functionals, treatment of chemical concepts with the density functional theory.

UNIT- IV

Computer Experiment

Computer experiments using quantum chemistry-software packages such as GAUSSIAN/GAMESS/MOPAC and modelling software e.g. MM2/ AMBER/CHARM etc.

Books Suggested

1. Modern quantum Chemistry, N.s. Ostlund and A. Szabo, McGraw Hill.
2. Methods of Molecular Quantum Mechanics R. McWeeny and B.T. Sutcliffe. Academic Press.
3. Density Functional Theory of Atoms and Molecules R.G. Parr and W. Yang. Oxford
4. Exploring Chemistry with Electron Structure Methods. 18. Foresman and E. Frisch. Gaussian Inc.
5. Semi-empirical MO theory. J. Pople and D.L. Beveridge.

Liquid State

UNIT- I

General Properties of Liquids

- a. Liquids as dense gases, liquids as disordered solids, some thermodynamic relations, internal pressure and its significance in liquids, Equations of state, critical constants. Different types of intermolecular forces in liquids, different potential functions for liquids, additively of pair potential approximation.
- b. A classical, partition function for liquids, correspondence principle, configuration integral, configuration properties.

UNIT- II

Theory of Liquids

Theory of liquids, partition function method of model approach; single cell models, communal energy and entropy L TD model, significant structure model.

UNIT- III

A- Distribution Function and related Equations

Radial distribution function method, equation of state in terms of RDF. Molecular distribution functions, pair distribution function. Relationship between pair distribution function and pair potential function. The IBG equation, the HNC equation, the PY equation, cluster expansion.

B- Methods for Structure Determination and Computational techniques

Spectroscopic techniques for liquid dynamic structure studies, Neutron and X-ray scattering spectroscopy, Computation Techniques-Monte Carlo and molecular dynamics methods.

UNIT- IV

Supercooled and Ionic Liquids

Supercooled and ionic liquids, theories of transport properties; non Arrhenius behaviour of transport properties, Cohen Turnbull free volume model configurational entropy model, Macedo- Litovitz hybrid model, glass transition in supercooled liquids.

Books Suggested

1. An Introduction to Liquid State, P.A. Egelstaff. Academic press.
2. The Dynamic Liquid State, A.F.M. Barton, Longman.
3. Introduction to Statistical Thermodynamics, T.L. Hill, Addison Wiley.
4. The Liquid State, J.A. Pryde. Significant Liquid Structures. H. Eyring and M.S. John.

Inorganic Chemistry (25)

Any two of

(A) Spectrophotometric Determination

- a- Manganese/chromium/vanadium in steel sample.
- b- Nickel/molybdenum/tungsten/vanadium/uranium by extractive spectrophotometric method.
- c- Fluoride/nitrate/phosphate
- d- Iron-phenanthroline complex: job Method.

(B) Flame Photometric Determinations:

- a- Sodium and Potassium when Present together
- b- Lithium/calcium/Barium/Strontium
- c- Cadmium and Magnesium in tap water.

Organic Chemistry (25)

(A) Multi Step Synthesis of organic Compounds

Preparation of organic compounds involving not more than three stages.

- i) Benzanilide from Benzene
- ii) Benzilic acid from Benzoin
- iii) Quinoline from Aniline
- iv) 2-phenylindole from phenyl hydrazine.
- v) Alkylation of diethyl malonate with an alkyl halide.

(B) Paper Chromatography

Separation and identification of the sugars present in the given mixture of glucose, fructose and sucrose by paper chromatography and determination of R_f values. Identification of organic compounds on the basis of given spectral data (UV, IR, PMR, CMR and MS)

Physical Chemistry (25)

(A) Polarography

i- Estimation of Pb²⁺ and Cd²⁺/Zn²⁺ and Ni²⁺ ions in a mixture of Pb²⁺ and Cd²⁺/Zn²⁺ and Ni²⁺ by polarography. Determination of dissolved oxygen in aqueous solution of organic solvents.

(B) E.M.F. Measurement

i- Determination of the equilibrium constant of the reaction

ii- Determination of activity coefficient of electrolytes.

iii- Potentiometric titration of a solution of Fe²⁺ against Cr₂O₇ and the determination of the redox potential of Fe²⁺ u Fe³⁺ system.

iv) Determination of ionic product of water (K_w)

Viva voce

15

Records

10

Book Suggested

1. Inorganic Experiments. 1. Derek Woollin VCH
2. Microscale Inorganic Chemistry, Z Szafrn R.M. Pike, M.M. Singh. Wiley.
3. Practical Inorganic Chemistry, G. Mar and B.W. Bookett. Van Nostrand.
